College of Engineering

www.aaa.alaska.edu/collegeofengineering

The College of Engineering offers graduate degrees in civil engineering, mechanical engineering, and project management. The two engineering degree programs require a baccalaureate degree in engineering for admission while the project management program requires a baccalaureate degree in engineering, science or equivalent areas. The graduate offerings of the College of Engineering are scheduled to accommodate evening students. As a result, the graduate programs normally require two or more years for completion. A project or thesis may be required as a part of each graduate program within the College of Engineering.
