

Bachelor of Science in Nursing

Program Student Learning Outcomes

Students graduating with a Bachelor of Science in Nursing will be able to:

- Demonstrate clinical reasoning by making evidence-based nursing judgments through the use of intellectual, interpersonal, and technical competencies to promote safe and effective client-centered care.
- Implement caring behaviors in the practice of professional nursing using established standards, evidence-based practice, and innovation to prevent illness and promote and restore health in order to meet the changing needs of diverse individuals, families, groups, and communities.
- Utilize principles of management and leadership to collaborate as a member of the interprofessional care team.
- Compare and contrast the roles of the professional nurse in promoting optimal healthcare policies locally, nationally, and globally.
- Develop an individualized plan for ongoing professional development and professional identity using a technological platform.
